Continuation of 11. does NOT place the application in condition for allowance because:

Applicant's arguments are not persuasive.

The applicant asserts that Fleischer does not teach or suggest coating the monofilament before the monofilament is used in the papermaking fabric. The applicant asserts that the fabric is coated, rather than each monofilament. The examiner respectfully disagrees. Fleischer clearly illustrates the monofilaments as being individually coated with a sheath of resin material. See Figure 7 wherein the resin sheath (18) coats the yarn (16). In addition, Fleischer specifically states that the yarns (16) have been coated with the resin (18) (column 4, lines 22-36).

The applicant asserts that there is no motivation to combine the references. The examiner respectfully disagrees. Fleischer does not appear to specifically disclose that the layers of the resin sheath are visibly distinguishable from one another and the core by contrasting color or reflectivity, but Fleischer does disclose that the yarns are subject to abrasion and wear (column 1, line 41 through column 2, line 50). Parsey and Lamb each disclose that it is known in the abrasion and wear yarn art that a core may be surrounded by a plurality of outer layers of different colors to indicate the degree of wear (see entire documents including column 2, lines 8-29 of Parsey and column 4, lines 20-35 of Lamb). It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the multilayer resin sheath of the monofilament of Fleischer with a plurality of outer resin layers of different colors from one another and the core, motivated by a desire to allow for the indication of the degree of wear.
